Add a vCenter Server instance

Configures Automation Orchestrator to connect to a new vCenter Server instance, so that you can run workflows over the objects in the vSphere infrastructure.

| Set the vCenter Server instance properties | Set the connection properties | Additional Endpoints |

IP or host name of the vCenter Server instance to add

vcenter-vi1-paris.corp.vmbeans.com

HTTPS port of the vCenter Server instance *

443

Location of the SDK that you use to connect to the vCenter Server instance *

/sdk

Do you want to ignore certificate warnings? If you select Yes, the vCenter Server instance certificate is accepted silently and the certificate is added to the trusted store

☑

Add a vCenter Server instance

Configures Automation Orchestrator to connect to a new vCenter Server instance, so that you can run workflows over the objects in the vSphere infrastructure.

Set the vCenter Server instance properties	Set the connection properties	Additional Endpoints

Do you want to create a session per user to the vCenter Server? If un-checked, Automation Orchestrator will create a shared session (single connection) to the vCenter Server.   ☑

Username that Automation Orchestrator will use to connect to the vCenter Server. *

Administrator

Password that Automation Orchestrator will use to connect to the vCenter Server. *

Domain name

Add a vCenter Server instance

Configures Automation Orchestrator to connect to a new vCenter Server instance, so that you can run workflows over the objects in the vSphere infrastructure.

Set the vCenter Server instance properties	Set the connection properties	Additional Endpoints

Configure additional vSphere endpoints such as PBM and SMS endpoint URLs. In order to enable the vSphere storage management capabilities both SMS and PBM endpoint URLs must be specified. Endpoint need to be specified as URLs - https://hostname:port/service/path

URL of PBM endpoint (the default vSphere 6.5 PBM endpoint URL is https://vSphereHostName:443/pbm)

https://vcenter-vrl-paris.corp.vmbeans.com:443/pbm

URL of SMS endpoint (the default vSphere 6.5 SMS endpoint URL is https://vSphereHostName:443/sms/sdk)

https://vcenter-vrl-paris.corp.vmbeans.com:443/sms/sdk
